Summary

Hi, my name is Ander, i am 17 and i am a developer. I am a coding on python, also i know php. I have been learning a coding almost for three years and will not be going to stop because new technologies released every month and i want to know them for create more cool and advanced app, i want that people enjoy when using my app and admire him, and of course i want to push myself simultaneously with the time. I am so fucking excited by technologies that i can spend all my time for learn it. My purpose of life is create something that help human to develop and improve the world in which we live and where i can to do it if not in programming. Besides coding i also like to design. I think, if you want to create something new you must know code and design. For my description no one is so suitable as Elon Musk, that why he is my idol. As you can understood i want to dedicate my life to technology, that's why i want to be a coder and improving my skill while all life.

Hobbies & Interests

First of all programming because I love to do and I spend most of my time on it, also I like read a book, but not a classic, I like books about programming and business, I read a book per a week, also I like to create a music in adobe audition, play on the guitar. By the way I like an english language, that's why I improve my skill on this, and besides english I want to know spanish, swedish and german. I like to design too, because I believe that minimalistic design is main in a good app. Besides design site a like to design 3d-model in 3d-max. Also I like to watch some education video.
